

Clamp Forklift Parts

Normally utilized as lift truck attachments in petroleum and chemical companies, the Drum Clamp, are particularly meant for the safe handling of regular 55-gallon drums. These additional parts greatly enhance production since they could handle as much as 4 drums for every load.

Drum Clamps are likewise used in the food processing business and wherever product is stored in drums. The use of this additional part not just immensely increases operator productivity but enables the driver to be able to grip the drums in a safe manner for transport. When trying to handle drums making use of typical forklift blades, much instability happens while cornering and braking. This common setback could be handled securely and efficiently by utilizing the Drum Clamp attachment instead.
