

Fork Positioners

A fork positioner is actually a device made out of top quality materials intended to be able to endure the most challenging operations and work environments. This particular piece of equipment can enable the one driving to be able to operate the blades hydraulically without leaving the seat. Side shifting models have the added ability to laterally position the arms or the entire load so as to facilitate more accurate lifting and placement in a faster and much more efficient method.

The unique fork pocket design can enable the one operating it to securely sway the unit's blades without any fear of destroying the positioning cylinders. This allows the operator the choice to either perform independent or simultaneous blade movement, depending on the job requirement. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be converted into blade positioners on existing units.
